

WE ARE DRIVEN BY MAKING GREAT IDEAS A REALITY.

Our industry is filled with terms only we understand. We could tell you we make custom rotational molded solutions, or modern manufactured plastics products, however it really comes down to this: Dutchland turns great ideas into real products.

Dutchland Plastics specializes in high-volume plastic rotational molding.

Dutchland Plastics' highly controlled rotational molding manufacturing process, also known as rotomolding, allows us to manufacture in comparable quantities to blow molding with fewer design constraints, ensuring your products meet the highest quality standards.

State of the art. American made.

In our Oostburg, Wisconsin facility, we can create rotomolded products from high quality polyethylene, flexible PVC, and engineered resins that meet our customer's exact specifications. Our facilities have the latest equipment, technology, systems and processes available to support large and small projects. As a full-service supplier, we also offer services like mold maintenance, product engineering, warehousing and distribution, drop shipping and more.

LET US TURN YOUR IDEA INTO REALITY

OUR CORE CAPABILITIES

At-A-Glance:

- High-Volume Rotational Molding
- Specializing in Completed Products
- More than 200,000 Square Feet of Manufacturing & Warehouse Operations
- Design & Engineering Support

Production Capabilities:

- Products & Parts up to 500 Lbs & 17 Ft Long
- Complex Geometries & Tight Tolerances
- Molded-In Graphics & Inserts
- Custom Surface Finishing
- Flexible & Rigid Foam Filling

Full Range Of Materials:

- Polyethylene
- Flexible & Rigid PVC
- Crosslinked, Highly Engineered, Specialty & Flame Retardant Resins
- Flexible & Rigid Foam

Post-Production Services:

- Parts Procurement
- Assembly
- Packaging
- Warehousing
- Logistics
- Drop Shipping
